Customer: Wastewater Plant

Location: PA

Specialist: Brian Hungarter

System/Product: Lubricups and Chesterton 635 SXC

Date Installed: 2018

CUSTOMERS CHALLENGE

Two wastewater plants were using an inferior grease, Mobil SHC 220, as well as not lubricating the bearings on ash handling mixers and conveyors on the frequency required for the bearings in these applications.

SOLUTION

The two plants are overseen by the same plant manager and Lubricups had been introduced to one of the facilities a few years ago. They loved the automation and reliability of the grease units, and fitted with the proper grease technology it improved operating performance resulting in a high level of customer satisfaction. Once the first plant became fans of the Lubricup EM 250cc units, the other plant wanted to use these units on their new ash handling system too.

The biggest factor that contributed to the success of this project was replacing an average commodity grease, MOBIL SHC 220, with a superior industrial, corrosion resistant high EP grease, Chesterton 635 SXC.

WE DELIVER RESULTS

CPE has the knowledge and expertise to find solutions for a wide array of customer needs.
