

Customer: Water/Wastewater

Location: NY

Specialist: Curt Jenkins

System/Product: FRP Gangway Platform

Date Installed: 2018

CUSTOMERS CHALLENGE

The maintenance crew periodically have to drain/clean out the debris collector tray pan that being collected from the sweeper above the water level and the sweeper on the bottom of the sludge tank.

As you can see, they have to bring a very long ladder over the metal handrail to be able to reach over to the tank's double concrete wall which was very difficult and unsafe for them to perform.

SOLUTION

CPE designed and fabricated a FRP gangway platform that will give them an easier and safer access to the tray pan as well as better ability and passage for the crews to bring the ladder over to the bottom of the tank.
